Art Unit: 2644

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 to 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Honda in view of Polk.

Honda discloses an audio system which is comprised of a first directional audio channel signal source (signal from 11-11n, which is input to 22); a surround audio channels signal source (33); a first electroacoustical transducer coupled to the first directional audio signal and to the surround audio channel source (39L and 39R); the first electroacoustical transducer constructed and arranged to radiate sound waves corresponding to audio signals from the first directional audio channel signal source and corresponding to audio signals from the surround audio channel signal source (39L and 39R do radiate sounds from the directional and the surround channel signal); a second electroacoustical transducer coupled to the first directional audio signal source (19L and 19R), the second electroacoustical transducer constructed and arranged to radiate sound waves corresponding to audio signals from the first directional audio channel signal source (radiate output from 12 which could be same as signal output from 22); a first and a second audio scaling devices (34 and 22). Honda does not disclose that the audio system could be used within a vehicle; a second directional audio channel source (signal from 11-11n, which is input to 22).

Art Unit: 2644

Polk discloses an audio system which is comprised of first transducers situated behind a first passenger location and for transmitting a first directional audio signals (RW and LW); a second transducers situated forward of the first transducers and for transmitting the first directional audio signals (RF and LF); and a third electroacoustical transducer for transmitting rear signals (RR and RL). Since Polk has disclosed a speaker system which could be used within a vehicle, it would have been obvious to combine Polk's teaching with Honda because a speaker system of Honda could be used within a vehicle for reproducing enhanced acoustic image.

Regarding claim 4, Honda as modified do not disclose a second directional audio channel source is a center channel source. However, even though Honda as modified do not disclose a second directional audio channel source being a center channel source, it would have been obvious to have a center channel source as claimed because reproducing a center sound in an audio system is well known in the art.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Weingartner, Klayman and Ambourn discloses a sound system within a vehicle.
